

- Fully automated
 - 24/7/365 monitoring
 - Live production graph
 - No expensive hardware
 - Actual vs expected production
 - Custom report generation
 - Display system anomalies
 - Alerts by email or text
- App Requirements:**
- Any Windows PC/laptop
- Service Requirements:**
- SolarEdge® inverter

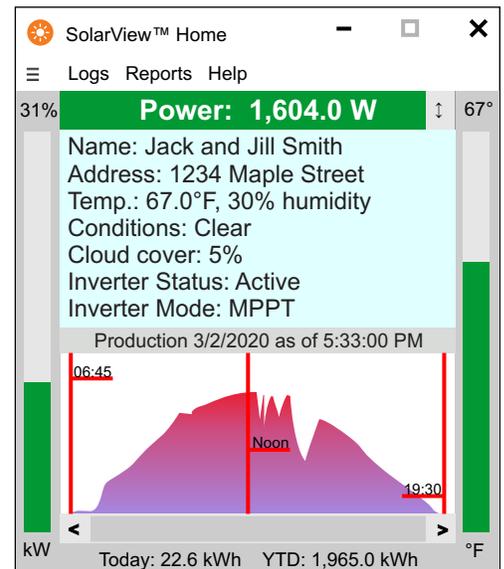

SolarView Home Monitor is a software-only monitoring system that makes it easy for solar homeowners to avoid disaster.

MONITOR ! - The SolarView Desktop™ app provides always-on visual insight into current production and status of your solar energy system. No more surprise electricity bills.

Unlike other solutions, there is no need to log in repeatedly and to navigate through a slow web site or a phone app that doesn't update automatically.

The SolarView Desktop app runs on any Windows desktop or laptop computer and requires very little screen space or system resources to operate. You will know at a glance whether or not your costly solar energy system is operating and exactly how much energy it's producing.

In addition, the 24/7/365 SolarView monitoring service continuously monitors system status and production even when you aren't using the SolarView Desktop app. SolarView Home Monitor costs just pennies per day and requires no complex or costly hardware.

The SolarView Desktop app tells you everything you need to know, at a glance.

AUDIT ! - SolarView compares actual production of your solar energy system against the promises made by the people who sold the system to you. Most solar contracts include an estimate of the level of production that you should anticipate. Often the contract also includes performance guarantees.

Production History vs Estimates

Monthly Production vs Expectations, in kWh

Select Year: 2020

	Original	Age	Degraded	Actual	Surplus
Jan	635	0.3	632	855	223
Feb	741	0.3	736	1,087	351
Mar	1,165	0.4	1,155	1,262	107
Apr	1,359	.05	1,345	1,121	-224
May	1,633	0.6	1,614	1,747	133
Jun	1,645	0.7	1,623	1,856	233
Jul	1,682	0.8	1,657	1,827	170
Aug	1,529	0.8	1,504	1,798	294
Sep	1,207	0.9	1,185	1,350	165
Oct	945	1.0	926	1,031	105
Nov	690	1.1	676	889	213
Dec	570	1.2	558	651	93
Year	13,801		13,611	15,474	1,863

Keep your solar provider honest by always knowing how your production compares against their pre-sales estimates and guarantees.

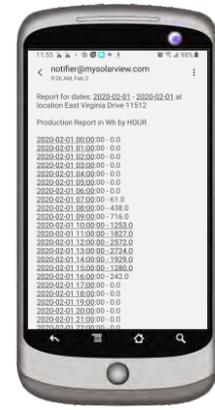

Most people don't keep track of production or remember what was promised - only to be disappointed by large bills from their electric company. SolarView stores those pre-sales promises, and then keeps track of actual results month after month for as many years as your system operates. You will have the data that you need to enforce contractual obligations.

SolarView even takes into consideration how your panels degrade over time. All solar panels lose efficiency as they age. SolarView allows you to record the expected rate of degradation (as provided by the manufacturer) and adjusts your results over time accordingly.

NOTIFY ! - Whether or not the SolarView Desktop app is running on your computer, the SolarView monitoring service continues to operate on your behalf. Our service operates 24/7/365, continuously checking your system status and production results.

For you to do the equivalent on your own, you would need to log into a web site or mobile app multiple times per hour, all day, every day. Instead, we do that for you.

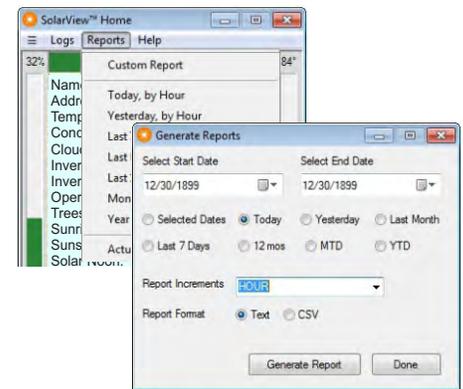

SolarView monitoring service notifies you each day to give you a summary of your production from the previous day, and also notifies you each month about the production of the previous month. These notifications are sent to you by email or text message.

Receive notifications by text or email even when your computer is turned off. Our service notifies you with daily and monthly production reports as well as any detected errors.

ANALYZE ! - Do you want to know your production results for a given day, week, month, or other time period? SolarView Desktop app provides you with the flexibility to generate a wide variety of reports and graphs. The time period can be from a pre-defined selection, or customized to your preference

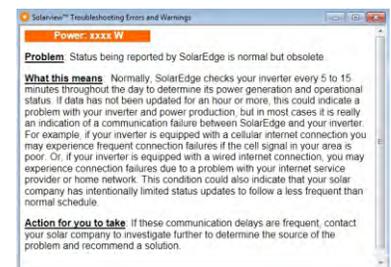

Your production data can be exported to CSV format and then opened in Excel or any other CSV-compatible software. This allows for virtually unlimited analysis using the tools of your choosing. In addition to CSV, reports can be generated as text and graphs.

Multiple custom reports can be generated on demand to show energy production history during any periods.

RESOLVE ! - SolarView Desktop app will notify you of any warnings or errors detected by your solar energy system. Notification is always visible in the app itself, and depending on your preferences may also be sent to your email or text message. You can choose to have either errors or warnings, or both, sent to your inbox and mobile devices.

In addition to problems detected by your solar inverter, SolarView will also notify you of anomalies that are not detected by your solar energy system. For example, if your inverter is not reporting current data in a timely fashion for any reason, SolarView will notify you even though the inverter does not treat this as an error condition.

If a problem is detected, SolarView will give you helpful context and suggestions for mitigating the issue.

Partnership Opportunities: SolarView Technologies actively solicits relationships with solar manufacturers, installers, and maintenance companies seeking to provide superior levels of service and assurance to residential solar homeowners in a cost-effective manner. Our partners save money (and can even generate a revenue stream) by outsourcing monitoring commitments to us thereby allowing their staff to focus on core services. Most solar installers offer contractual obligations to monitor residential solar installations but lack the dedicated staffing to fulfill such obligations. This can lead to customer dissatisfaction and installer liabilities. Our automated system provides a higher level of visibility directly to residential solar homeowners and allows installer/maintenance staff to focus on responding to actual problems. For more information, contact us at partners@mysolarview.com.
